

# Analytical Methods in Human Toxicology: Part 1

Ten essays describe recent developments in analytical techniques and equipment. They cover mass spectrometry, atomic absorption spectrometry, gas chromatography, radioreceptor assays, and histochemical procedures. General descriptions of methods are supplemented by articles dealing with analytical problems in forensic medicine and pharmacology. This book will be of interest to those who wish to explore the methods currently being used to solve a particular problem and those who need to see which technique is most pertinent to their area of research.
