

## Mental Health Computing (Computers and Medicine)

Increasingly more computer applications are becoming available to assist mental health clinicians and administrators in patient evaluation and treatment and mental health management, education, and research. Topics covered include: automated assessment procedures; MR-E (The Mental Retardation Expert); computerized assessment system for psychotherapy evaluation and research; computer assisted therapy of stress related conditions; computerized patient evaluation in a clinical setting; computerized treatment planning; the VA national mental health database; networks; managed care; DSM-IV diagnosis; quality management; cost control; knowledge coupling; telemedicine; the clinical library assistant; and monitoring independent service providers.
