

Charles Darwin: Genius of a Revolutionary Theory (Genius Scientists and Their Genius Ideas)

Charles Darwin published his most important book in 1859 called THE ORIGIN OF SPECIES. In this book Darwin claimed that plants and animals living today are descended from similar species that lived long ago. It caused an immediate uproar and upset some people because it appeared to go against the Bible. The genius of Charles Darwin is his discovery of a unifying theory of biology, explaining the diversity of life.
