

Coming Attractions?: Hollywood, High Tech, and the Future of Entertainment (Stanford Business Books)

Hollywood and Silicon Valley have long been uncomfortable bedfellows. Out of fear of pirating and lost profits, entertainment companies have historically resisted technological changes. Conversely, high-tech companies, more concerned with technological progress, have largely ignored the needs of the entertainment industry. Nevertheless, those products that we now take for granted, such as DVDs, MP3 players, and the Internet, are all due to the synergy of technology and entertainment. The switch to digital and web formats for entertainment represents huge potential market opportunities for both Hollywood and Silicon Valley. It has opened up new possibilities for entertainment and expanded the way content is created, distributed and consumed. Consider the phenomenon of YouTube and its wildly popular user-created content, or the ability to download movies and TV shows from sites such as iTunes and watch them on your iPod or computer, anytime and anywhere. The dual forces of consumer demand and rapidly changing content distribution are combining in new ways to create changes that will strike at the very foundations of the entertainment and technology industries. Depending upon how entertainment and technology companies respond, these changes can help them prosper or put them out of business. Media companies will have to become more like technology companies; and technology companies will need to change too. Because content creation, distribution and consumption are ever more tightly linked, Hollywood will need to understand what's happening in Silicon Valley and vice versa; changes in one industry will reverberate through the other. Some companies such as AOL and Time Warner have tried and failed (at least so far) to harness these forces, while a few companies such as Disney, Intel, and

Google have recently taken the initial steps. But many more companies wait, afraid to change but knowing they cannot conduct business as usual. With an insiders knowledge, researcher and consultant, Philip Meza insightfully clarifies what managers and investors in media and technology companies will need to do in order to successfully navigate todays tricky environment. Coming Attractions? Hollywood, High Tech, and the Future of Entertainment discusses the history of the key forces driving the relationship between entertainment and technology today and into the future.
