

# IEC 61340-4-3 Ed. 1.0 b:2001, Electrostatics - Part 4-3: Standard test methods for specific applications - Footwear

Describes a test method for determining the electrical resistance of footwear used in the control of electrostatic potential on people. This standard is suitable for use by the manufacturer of footwear as well as the end user. A method for measuring the electrical resistance of footwear alone is described and serves as an acceptance test for new footwear. Insulating footwear is not included within the scope of this standard although the electrical resistance measurement techniques may be applicable.
