

Atoms in Plasmas (Springer Series on Atomic, Optical, and Plasma Physics)

A study of radiative-collisional phenomena in neutral and ionized gases, focusing on a perturbed atom, i.e. an atom under the influence of different perturbations in plasmas, namely by electrical and magnetic fields. The treatment covers fundamental aspects of modern physics, such as atomic quantum mechanics and quantum optics, radiation and collisional processes in plasmas and gases, nonlinear laser spectroscopy, and plasma diagnostics.
