

# Prespacetime Journal Volume 3 Issue 12: Fundamental Problems in Modern Physics

Prespacetime Journal (PSTJ, <http://www.prespacetime.com>) is a publication in which physicists, mathematicians and other learned scholars publish their research results and express their views on the origin, nature and mechanism of spacetime and its possible connection to a prespacetime. It is also a journal where all learned scholars can present their models and experimental results on elemental particles, fundamental forces including gravity and related topics. This is PSTJ Volume 3 Issue 12 first published in October 2012. It is entitled Fundamental Problems in Modern Physics and contains following articles: (1) Unitarity, Locality and Spacetime Geometry: Foundations that Are Not Foundations; (2) Physics Needs a Physical Theory of Observation; (3) The Universe - an Effect without Cause; (4) Crisis in Physics: Causes of the Crisis & Ways Out of It; (5) What Is the Meaning of Fractional Electric Charges? (6) On New Virtual Scalar Particles in Quantum Field Theory; (7) Dynamic Instability of the Standard Model & the Fine-Tuning Problem; (8) Kantowski-Sachs String Cosmological Models in SenDunn Theory of Gravitation; (9) Is There Evidence for a Charged Higgs Boson? (10) Algebraic Long-Time Decay in Fractional Classical Mechanics; and (11) Nobel Prize in Physics 2012.
