

Semiclassical Standing Waves With Clustering Peaks for Nonlinear Schrodinger Equations (Memoirs of the American Mathematical Society)

The authors study the following singularly perturbed problem: $-\Delta u + V(x)u = f(u)$ in \mathbb{R}^N . Their main result is the existence of a family of solutions with peaks that cluster near a local maximum of $V(x)$. A local variational and deformation argument in an infinite dimensional space is developed to establish the existence of such a family for a general class of nonlinearities f .
