

Space, Time, Matter, and Form: Essays on Aristotles Physics (Oxford Aristotle Studies)

Space, Time, Matter, and Form collects ten of David Bostocks essays on themes from Aristotles Physics, four of them published here for the first time. The first five papers look at issues raised in the first two books of the Physics, centered on notions of matter and form; the latter five examine themes in the remaining books, including infinity, place, time, and continuity. Bostocks many insights will be welcomed by all scholars of ancient philosophy.
