

## Super Moebius Loop Theory: Quantum Universe

?.Superstring (Moebius loop) theory within our world and the antiworld The superstring theory is one of the theory, the hypotheses of the physics. It seems to add an idea, the supersymmetry, to the string theory to think that it is not the point particle that the size is 0 dimensional infinitely small in the material basic unit and that is the string which has an expanse in the one dimension and to be permitted to think that it extended. The beltlike plane which extends this more in this book and has an expanse in the two dimensional directions of the one which became shaped like the Moebius ring in the condition of one-fold of, two-fold, three-fold twists, being basic, and that is cronical-conjugation quantity each other among the ones to have done a cleavage at the energy with high space foundation period and this composes an elementary particle spin-angular-momentum. It says this change to be a canonical-transformation. With the canonical-transformation, the generalized-momentum mixes mutually with Lagrangian coordinates and the distinctions of both become ambiguous, but Lagrangian coordinates  $p$  and generalized-momentum  $q$  are called canonical-conjugation quantity, generically calling them, in the space to be set up by positive semi-conjugation quantity  $p, q$ , it is called a topological space and the canonical-transformation is the change that two topological spaces in the place around the cleavage of the Moebius ring correspond. One-fold of twists are equivalent to the 180 turn and the spin becomes on January 2nd. As for this Moebius band, the both sides are a distinction and the flaw table has connected with the back all too soon. Two-fold of twists are a 360 turn, as for the spin, 1 or 3-fold of twists are a 540 turn and the spin becomes  $1/3$ . In other words, I noticed a fact of being reciprocal relation respectively about the number of times and

the spin, i. e. the rotation symmetry of the Moebius twist. It is the goal of this book this time that will define a theory of elementary particles and a cosmism once more using this law. It is a 180 multiple that it leaves too much in 1, 2 or 3 of three-fold of twists, it is possible to twist one-fold, it is possible to twist two-fold and a rotation symmetry, spin are said to be decided, making 360 as 1. Because the Moebius ring doesnt close when the number of times of the twist is not an integer, as that is, become an integer for this to close, the combination of elementary particle is fixed. This thing is described at the item of the spin of the following electron. At each Moebius band, there is a laterality in the direction of the twist. Fraction spin composes material and integer spin composes power. It is clear that these are a fermion and Bose particle. Very much, the Moebius ring theory is possessing the full symmetry which contained a time symmetry. Bose particle and the fermion of the pair which caused Bose-Einstein condensation and so on become integer spin and the table and the back are separating a Moebius plane like a ring fully. Each surface maintains information from the past and information from the future and it presents a state of the entanglement about so-called quantum, too, when pairing. It supposes space to have been in the condition with very high energy in the moment of the space birth and each superstring is supposed to have been moving around freely in the space. The structure of the Gravity Confirm that the spin is in the reciprocal relation with the twist number of times of the Moebius ring which is the basic idea of this book again. It is the very much hot time that the early universe occurrence of the gravity was just done in the space birth.
