

Objective: This book, Super Physics for Super Technologies, proposes that a new physics exists. The findings are based on 16 years of extensive numerical modeling with empirical data, and therefore, both testable and irrefutable. The Need: In 2012 Prof. Nemiroff, using NASA's Fermi Gamma-ray Space Telescope photographs, showed that quantum foam cannot exist. In 2013, Solomon invalidated exotic matter and all string theories. These have been reduced to mathematical conjecture. In 2015 the Kavli Foundation, with Prof. Efsthathiou, Prof. Pryke, Prof. Steinhard discussed the issues with the Planck Space Telescope findings of a Universe that is significantly simpler than our theories. Therefore the need for new physics. The Benefits: The replacement of the Schrodinger wave function with a simpler probabilistic wave function, results in a new electron shell model based on the Rydberg equation, giving exact results with quantum mechanics; leading to a new Standard Model and the unification of photon shielding, transmission and invisibility as the same phenomenon. Solomon's inference is that any current or future stealth technology can be neutralized. Benjamin is the second researcher I have met who has tried to consider a non singular cosmology. The first was Cristi Stoica, whom I met in 2010. Andrew Beckwith PhD
