

The Hidden Field Energy Powered Christmas Tree Light-Sail Smorgasbord. Notes On Novel Light-Sail Propulsion Methods. Volume 50.

We can conjecture on hidden strong force and weak force analogues as well as hidden supersymmetric and gravitational analogues in addition to the electromagnetic analogues presented in the previous series of books on Christmas Tree Light-Sails.. Another fascinating concept involves extraction of residual psychic energy which may be left as an imprint on all matter formerly embodied in the bodies of living sentient organisms whether the organisms are alive, cryogenically suspended, or deceased. We already have precedent for the existence of consciousness as associated with matter in the brains of living human persons and animals, especially socially advanced non-human animals commonly kept as pets or companions including dogs and cats. Accordingly, an advanced spacecraft would collect this psychic energy, perhaps without destroying it or causing it to lose its identity, and use it as a propulsive power source. The idea sounds far-fetched at first but is perhaps more presentable given the process of volition and its association with brain states in live human persons. The following compound operator includes these new propulsion modes as a dimensionless factor modifying all relevant linear propulsion terms such as those for which sigma series as functions of the index, j, are included. The compound operator will actually be denoted as a sum of the new hidden energy terms and the psychic energy propulsion. $\{ \{ (\text{Cont Spec}): \{ f(\text{SM \& MMM}), (\text{Ex. Of Strong, Weak, SUSY, Grav, Uncloaked}), (\text{Fract Of Uncloaked Strong, Weak, SUSY, Grav, Uncloaking Con To S-C K.E.}) \} \} + \{ (\text{Cont Spec}): [\text{Psychic Energy Orig. From Personal And Non-Personal Life-Forms}] \} \}.$
