In this section of Lesson 3, we will revisit the concept of power and develop new equations that express power in terms of current, electric potential difference **Work, Energy, and Power - The Physics Classroom** The standard metric unit of power is the Watt. As is implied by the equation for power, a unit of power is equivalent to a unit of work divided by a unit of time. Thus, a Watt is equivalent to a Joule/second. For historical reasons, the horsepower is occasionally used to describe the power delivered by a machine. **Power (physics) - Wikipedia** Oct 21, 2013 - 6 min
