

# The Psychobiology of Transsexualism and Transgenderism: A New View Based on Scientific Evidence: A New View Based on Scientific Evidence

Written by a biopsychologist, this book describes and explains transsexualism and transgenderism (TSTG) from a scientific vantage point. Provides an unprecedented comprehensive coverage of transsexual and transgender science. Enables readers ranging from the general public to medical professionals, experimental and clinical psychologists, and policymakers with a broad understanding of transsexualism and transgenderism (TSTG) based on available scientific knowledge. Underscores how the conventional wisdom regarding the causes of transsexualism and transgenderism is wrong, and that the causal factors supported by scientific evidence are genetics and epigenetics. Supplies a balanced depiction of transsexual transition as a process that has proven to generate positive results but involves some specific health risks. Explains how the biology of TSTG people is different from non-TSTG people.
