

Diesal? and other future transport fuels (60 Minute Briefing Series Book 1)

This book is the first in a new series of briefings that can be read in about an hour. In our fast paced lives there is no time to read books longer than necessary. A number of important future trends emerge from my work, so I have decided to write about them. I find the future fascinating and You probably do too. This is not guesswork, it is forward thinking. Everything is based on a solid foundation of facts that are referenced at the end of the book for you to check for yourself, if you are so inclined. You are probably a sophisticated reader, so you will know that over two thirds of all the oil we dig out of the ground is burned just to move ourselves and our things around. You will also know that oil is getting more and more expensive. Yet the oil is not running out, yet. This book looks at the future trend of oil supply and asks what is the future for transport fuels. The answer is Diesal, read on to find out why..
