

The Circular Theory

Between any X and Y there is a hidden circle. This turns us all into the same fundamental, oppositional dynamic, also known as conflict. We live in a sea of trillions and trillions of invisible circles, yet all circles are joined by one circle. This is The Circular Theory. Up to this point, we have not noticed, the circle is the most basic unit in physics, mathematics, chemistry and biology, and the basis for observation, reproduction, and movement. It unifies the standard model and string theory in physics, explains the open paradoxes in mathematics, produces a viable explanation for gravity, and supplies a realistic analytical paradigm that anyone can use. In physics, its called Conservation of the Circle. In reality, Everything is circle. In life, absolute relativity. As it is reviewed and understood as a mandatory, ubiquitous, 50-50, foundational dynamic, The Circular Theory will transform humanitys thinking. The circle integrates the hard sciences with the social sciences, clears up the non-productive dynamics in finance and politics, addresses the problems caused by multiple religions, and produces a more reliable prosperity, peace and productivity for all. The theory is under consideration, now, by physicists, mathematicians, government leaders, economists, business leaders, academics, psychologists, and philosophers. But, most importantly, it needs to be considered by you. The circle, as a 50-50 underlying dynamic, flips all strategies from weakness-avoidance to strength-maximization. If you like to understand how things tick, and if you are very tired of the same old excuses and explanations, The Circular Theory is for you. Ilexa Yardley collaborated with Brian Josephson, Nobel Laureate physicist, on the Mind Matter Unification project at Cambridge University to produce The Circular Theory. This is Yardleys eighth book on universal relationship patterns.
