

Top-Down Investing (Styles in Investing Book 1)

This book implements the best and yet simplest strategy in selecting stocks. Read first my Top-Down Investing in a Nutshell and how we implement this strategy by market timing, sector (subsector) timing and stock selection. This book helps someone looking for simple but profitable strategies in investing. It only takes about half an hour a month to monitor the market and decide what stocks to buy and sell. This book uses the advanced strategies described in my other books but in very simplified instructions. The trick is to make them easy to use from the research information available to us free of charge. This book has 6 sections. In general, the first chapter in each section tells you what to do (the Do chapter) in very simple terms. The other chapters in each section explain the detail and you can skip them for now. I start with market timing. You should not buy any stocks when the market is plunging. Then I look at the best sector and then the best stocks within the selected sector. Updated: 02/2016 Size: 150 pages (6*9)
